

# Dynamics of Virtual Payment

Study of the Progression Pattern of Virtual Payment in Physical Scenarios under Different Cultures

---

## PROJECT OUTLINE

---

### Problem Definition

To better understand people's acceptance of emerging payment methods like Apple Pay and Ali Pay. Learn about the frictions happening when virtual payment meets with physical scenarios. And to explore a just, sensible, and viable future for smart payment system.

### Objectives/Goals

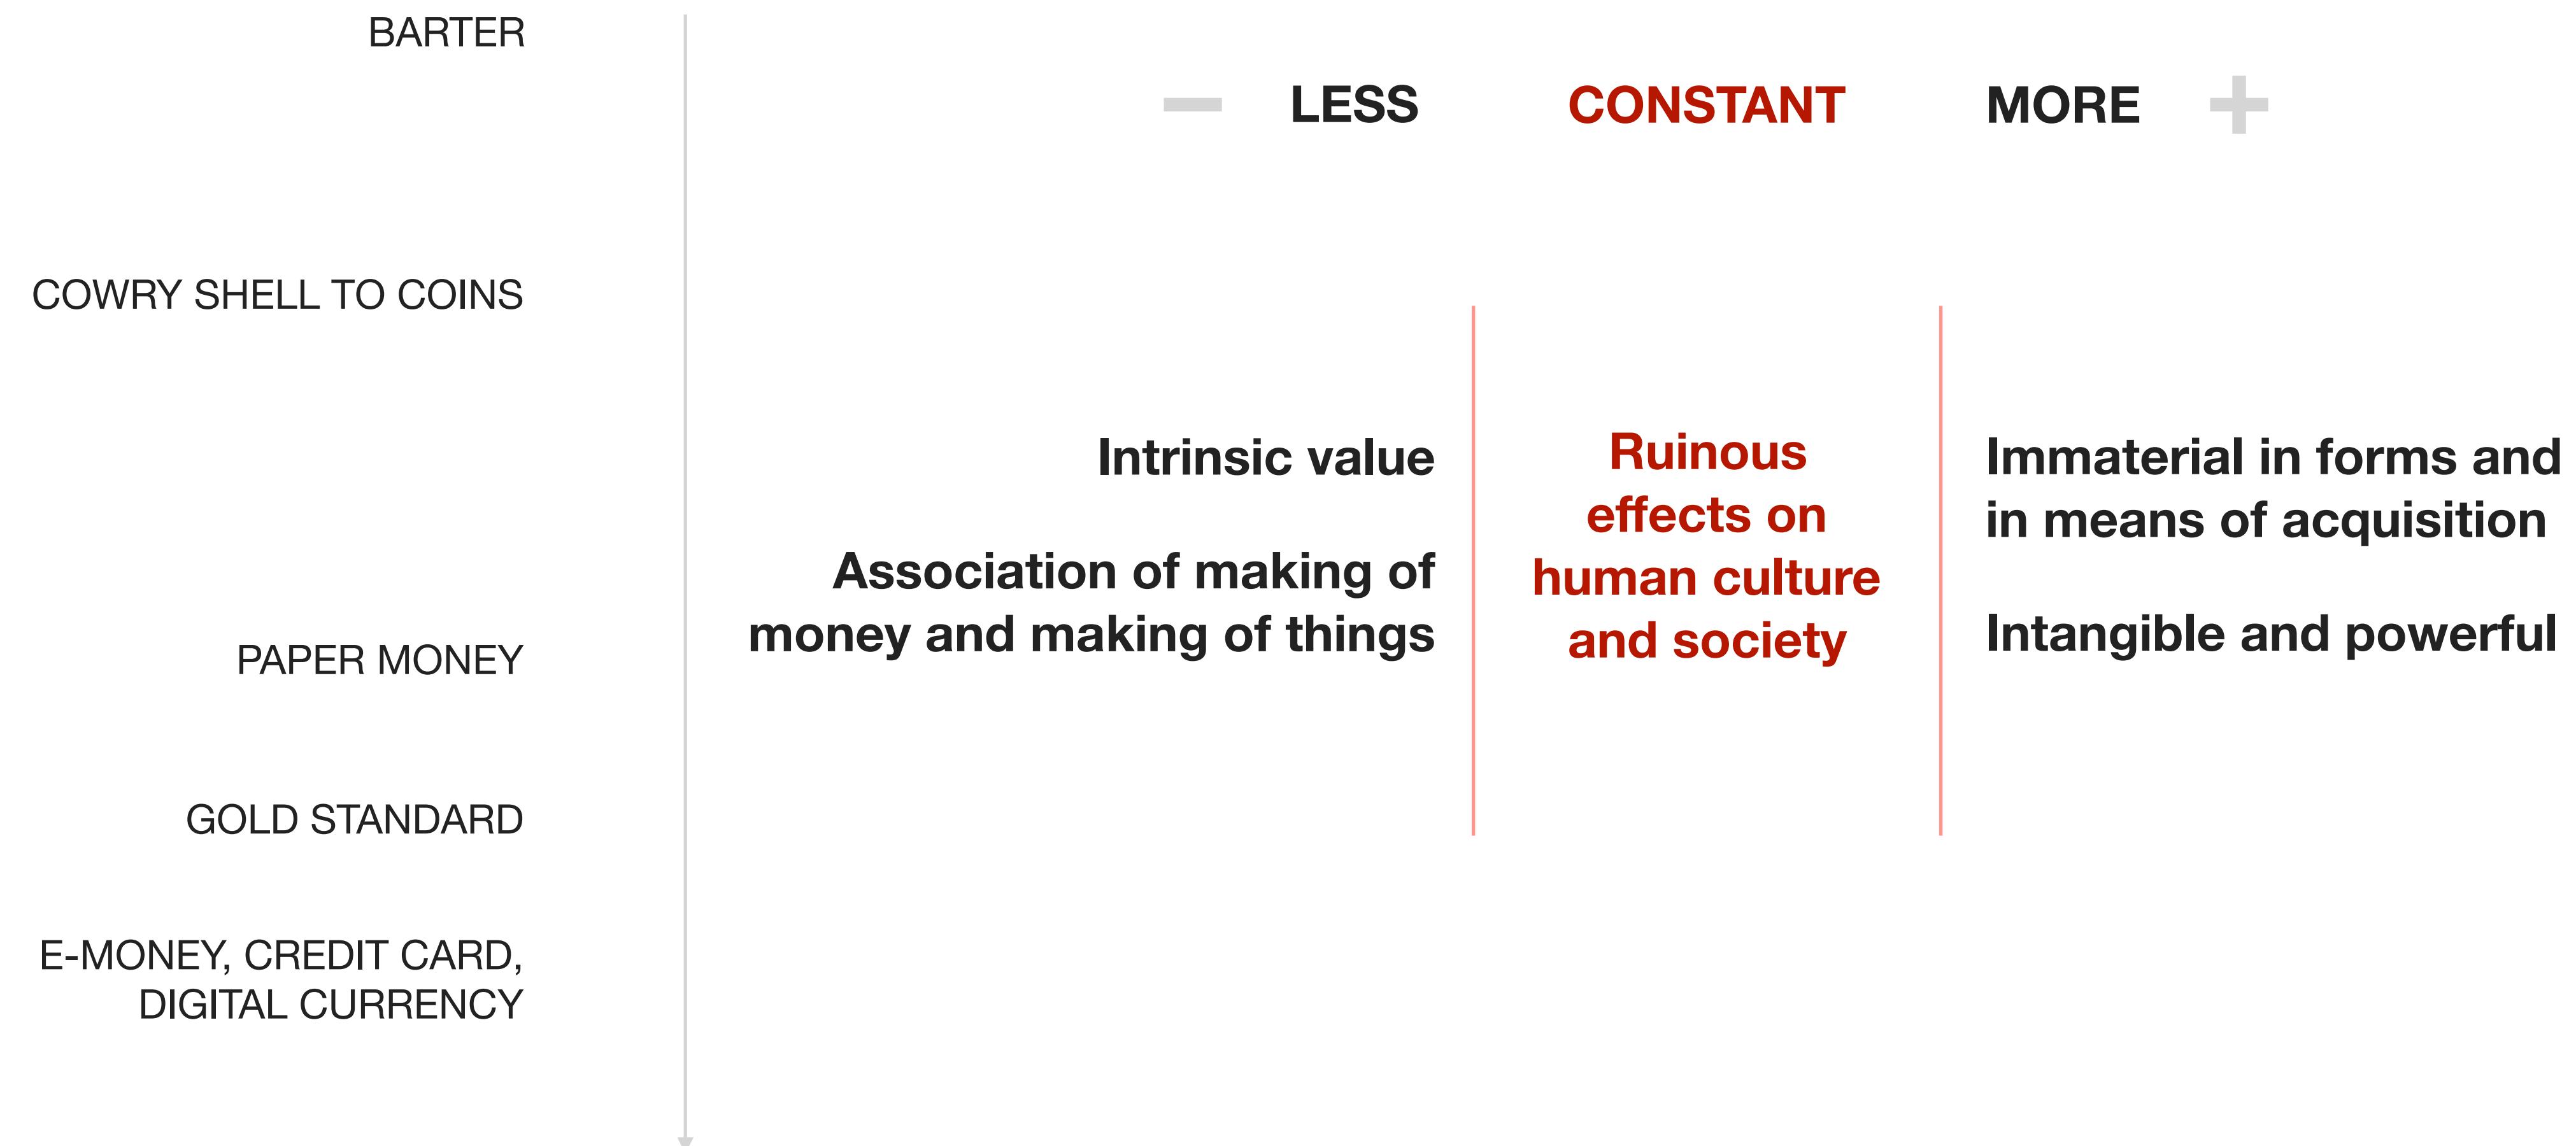

To explore a just, sensible, and viable future for smart payment system based on answering:

- What does a just, sensible, and viable future of payment mean for people?
- How can virtual payment make benefit for various stakeholders?

## EVOLUTION OF MONEY

BARTER	Trading valuable commodity	Imprecise value exchange	Human elements involved	Slow and off-the-record
COWRY SHELL TO COINS				
PAPER MONEY				
GOLD STANDARD				
E-MONEY, CREDIT CARD, DIGITAL CURRENCY	Math of digital numbers	Precise value exchange	Computer and algorithm controlled	Efficient and transparent

## EVOLUTION OF MONEY

## CONSEQUENCES OF VIRTUAL PAYMENT

UNADDRESSED

**Lack of physical interaction** between two parties (who pays and who collects). Relationship between people might become weaker and the trust between people need to be addressed through other methods

UNINTENDED

**Elevated threshold** for modern transaction. Smart phone or other devices will be needed as a necessity of using virtual payment. Those who do not have access to the device will be left out. The gap between the rich and the poor will be magnified.

UNEXPECTED

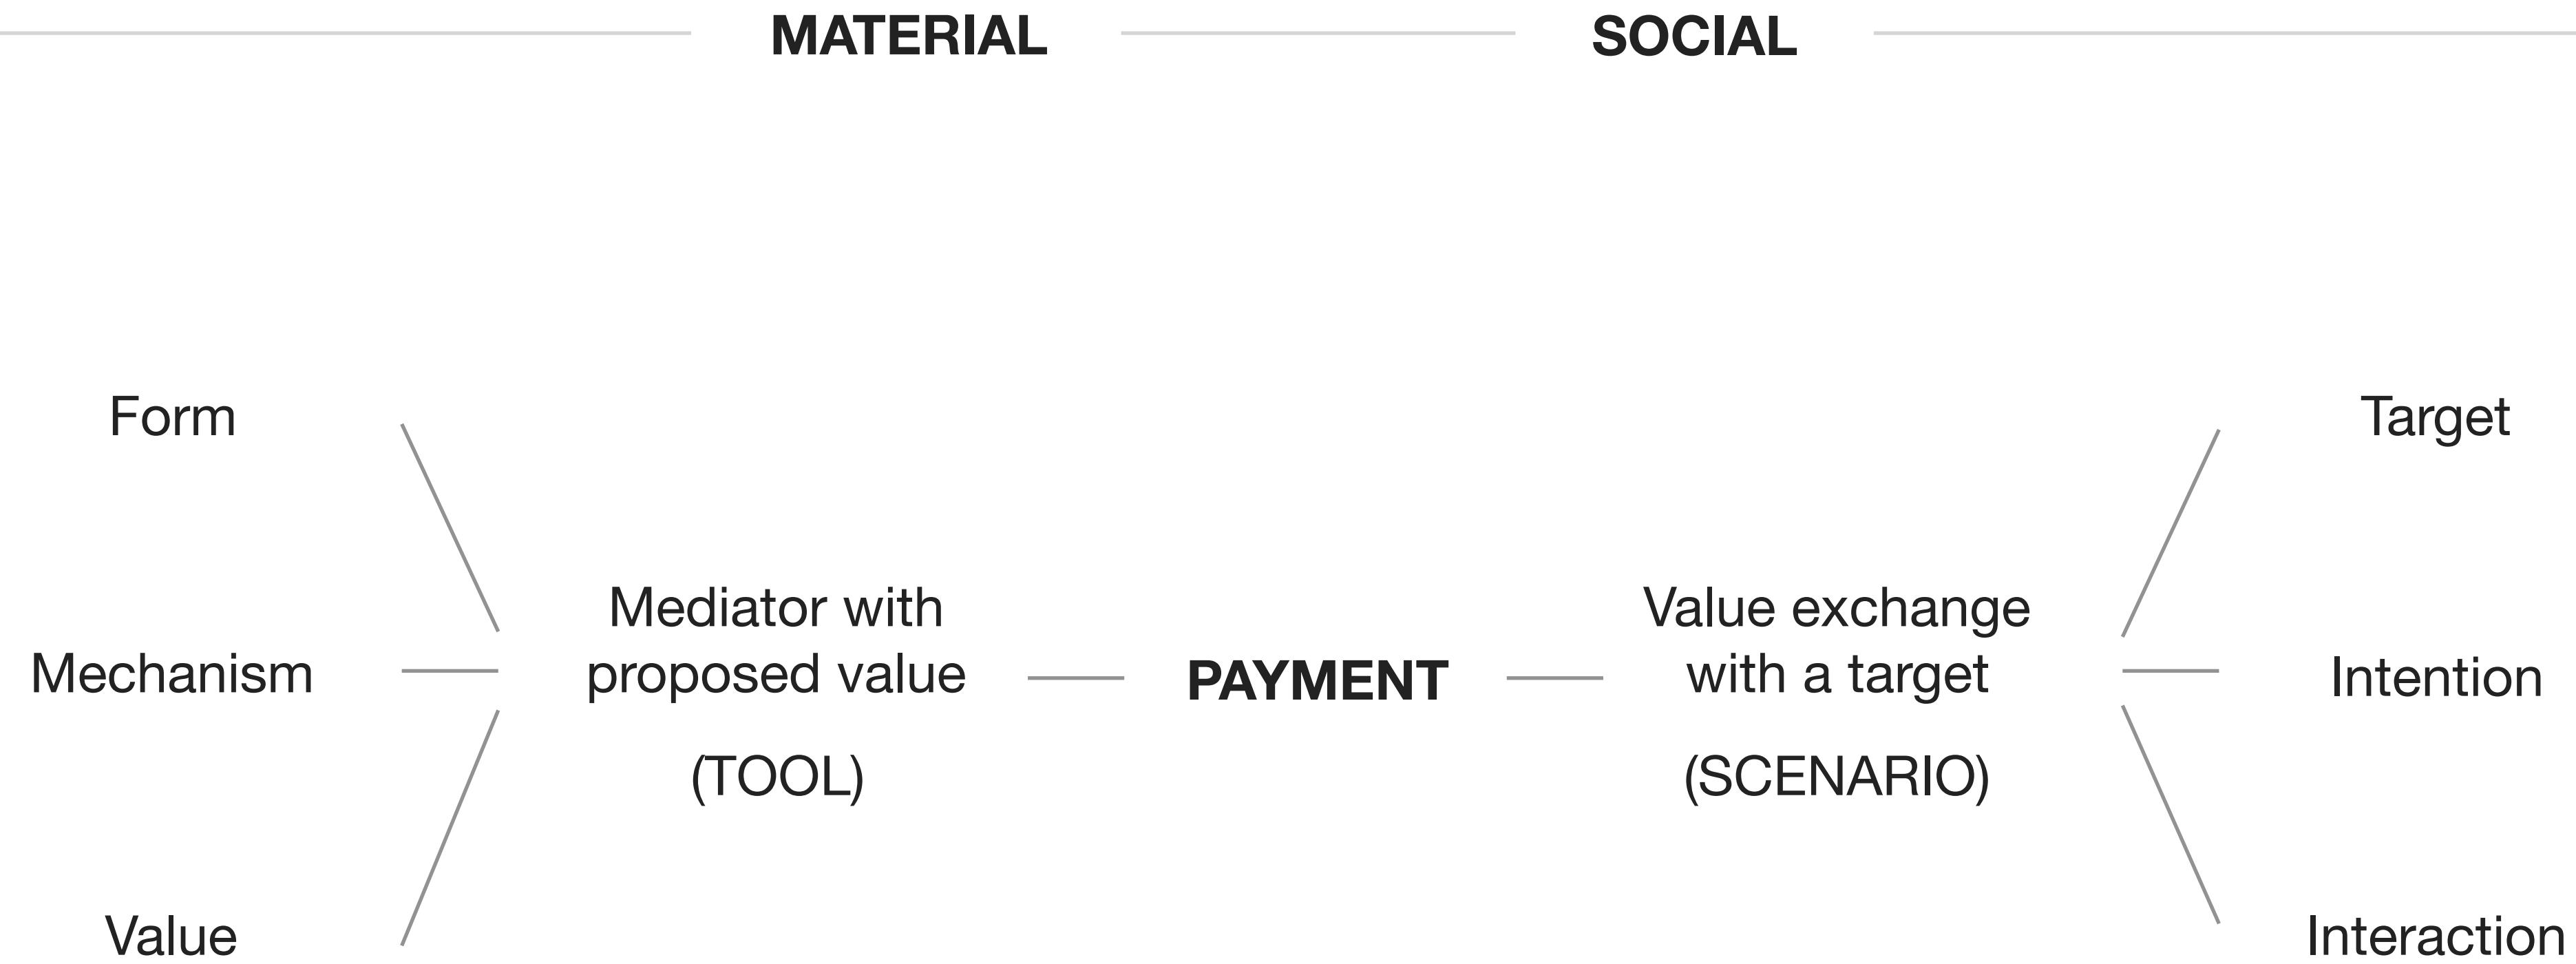

People would have different understanding over money. **New pattern of consumption** will be generated.

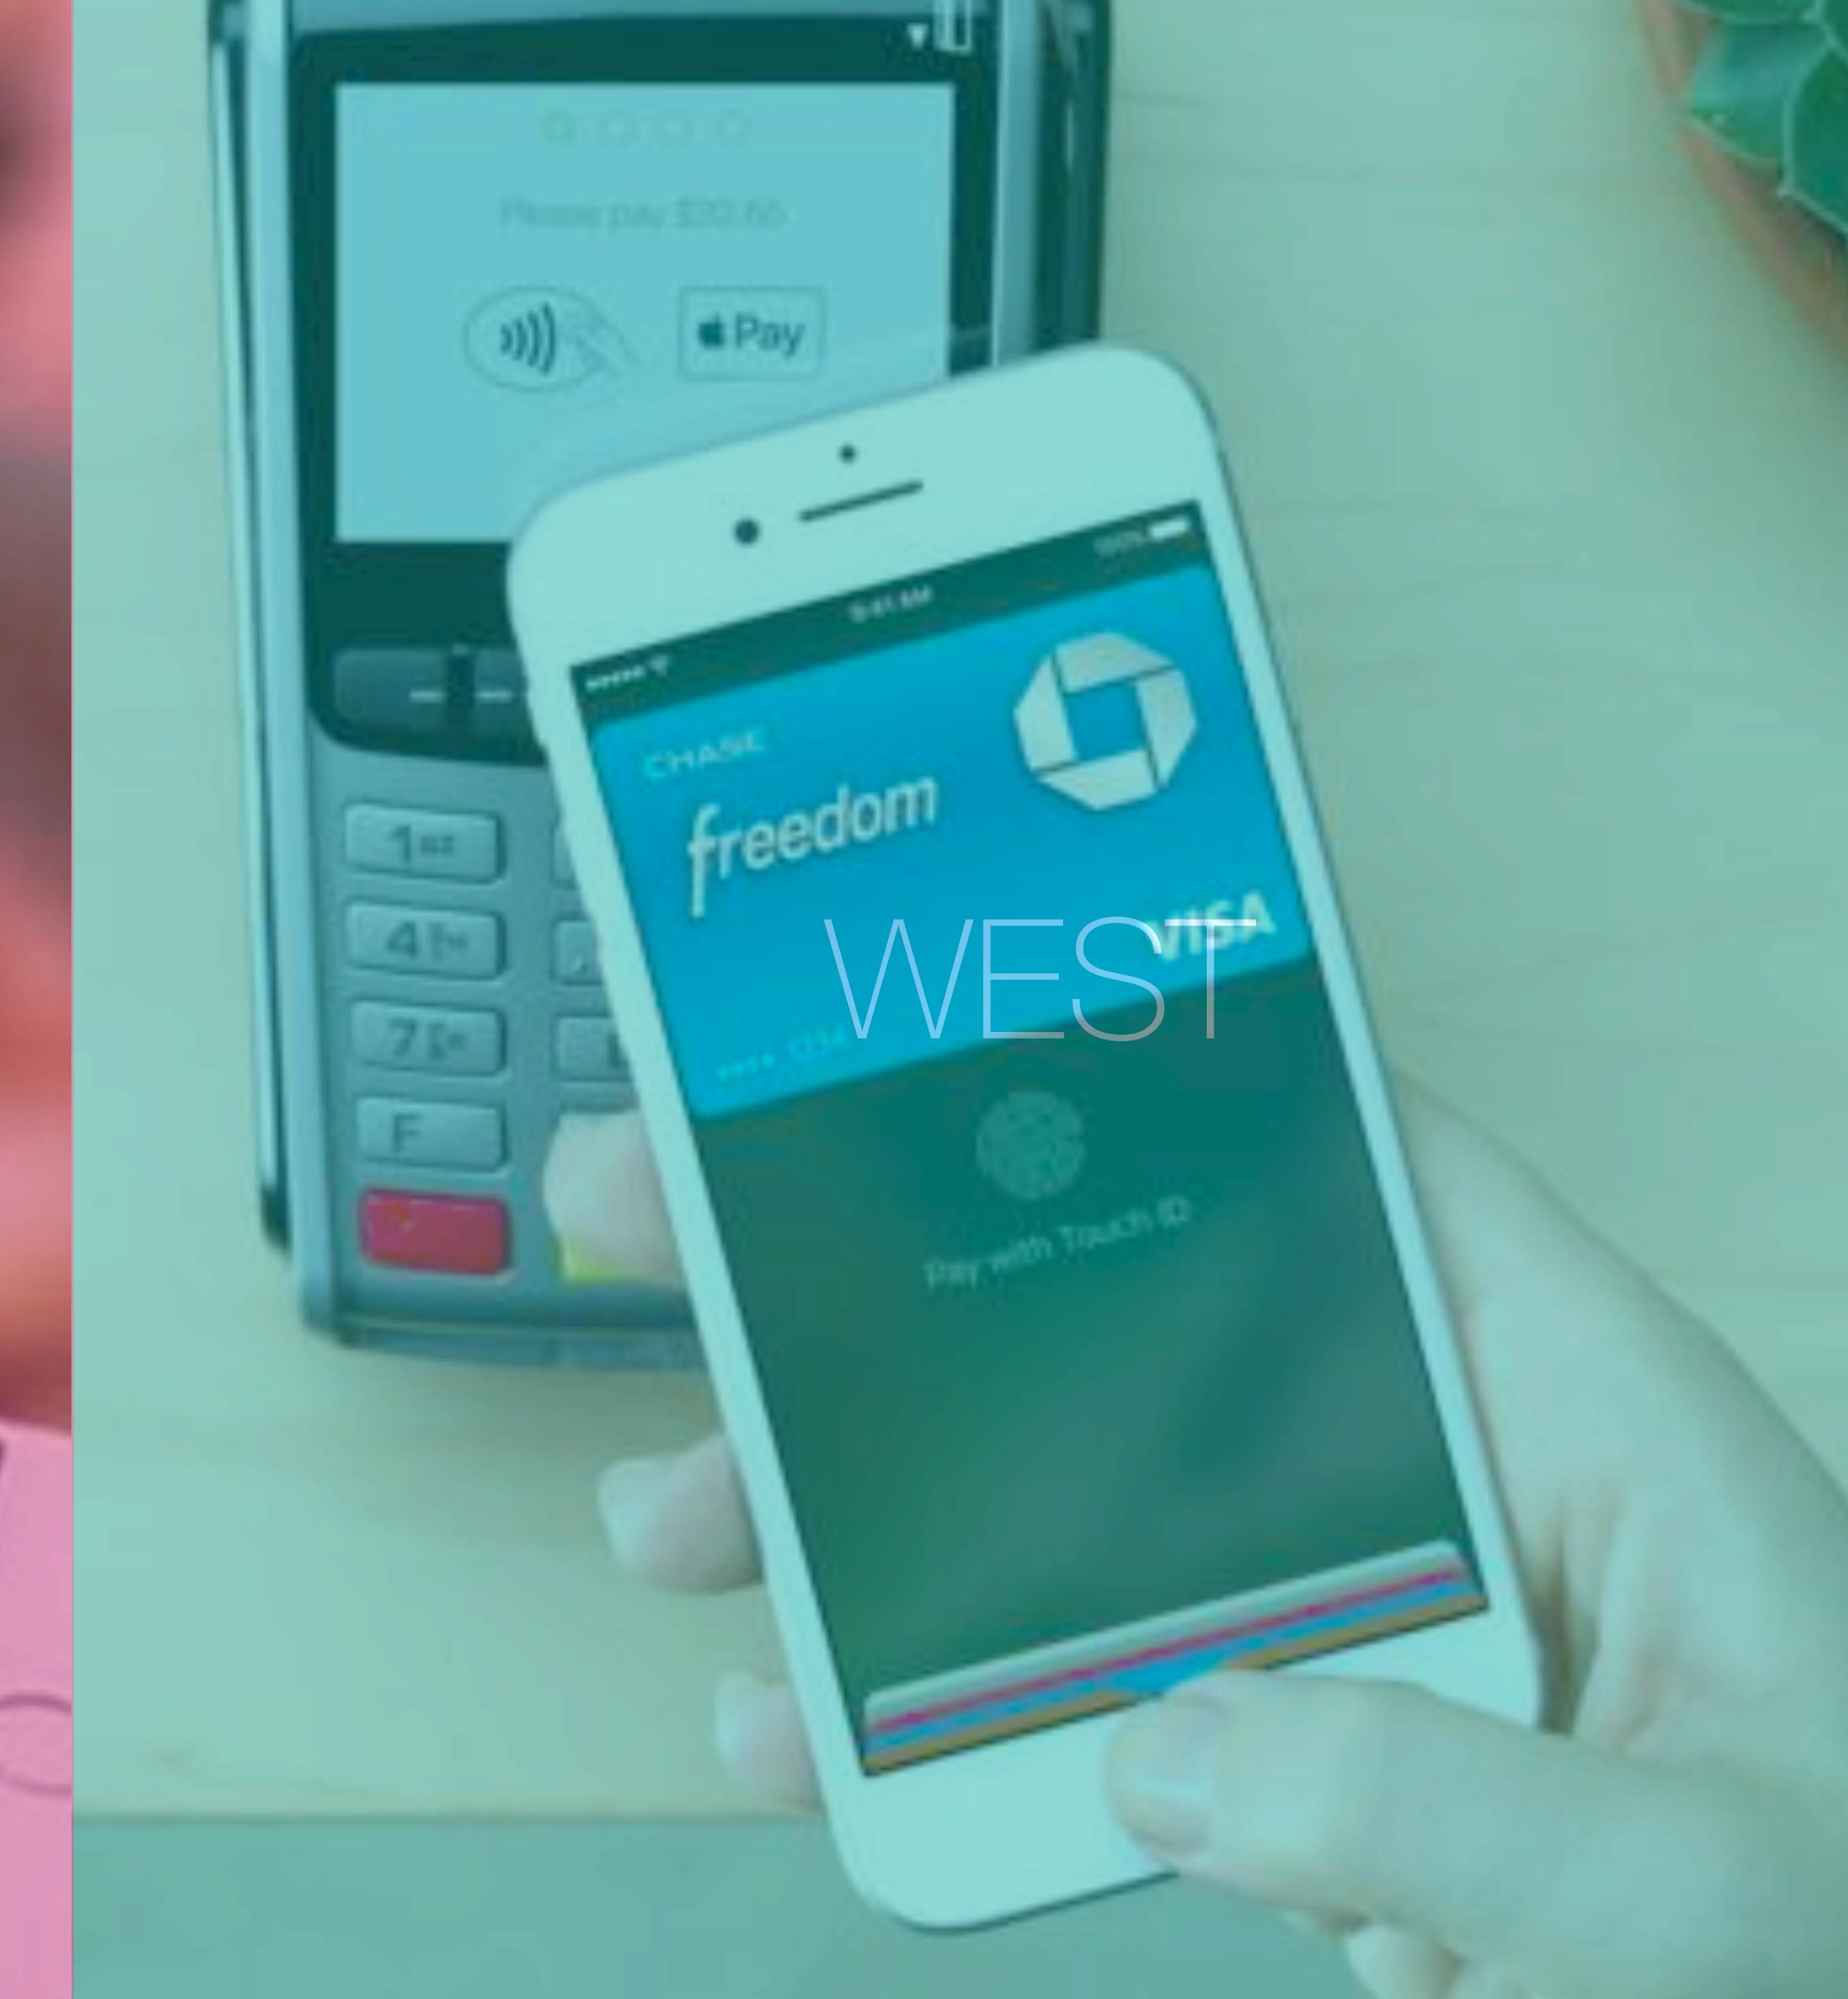

UNFORESEEN

**Data of transactions** will be collected and might be used for various reasons.

UNFORESEEABLE

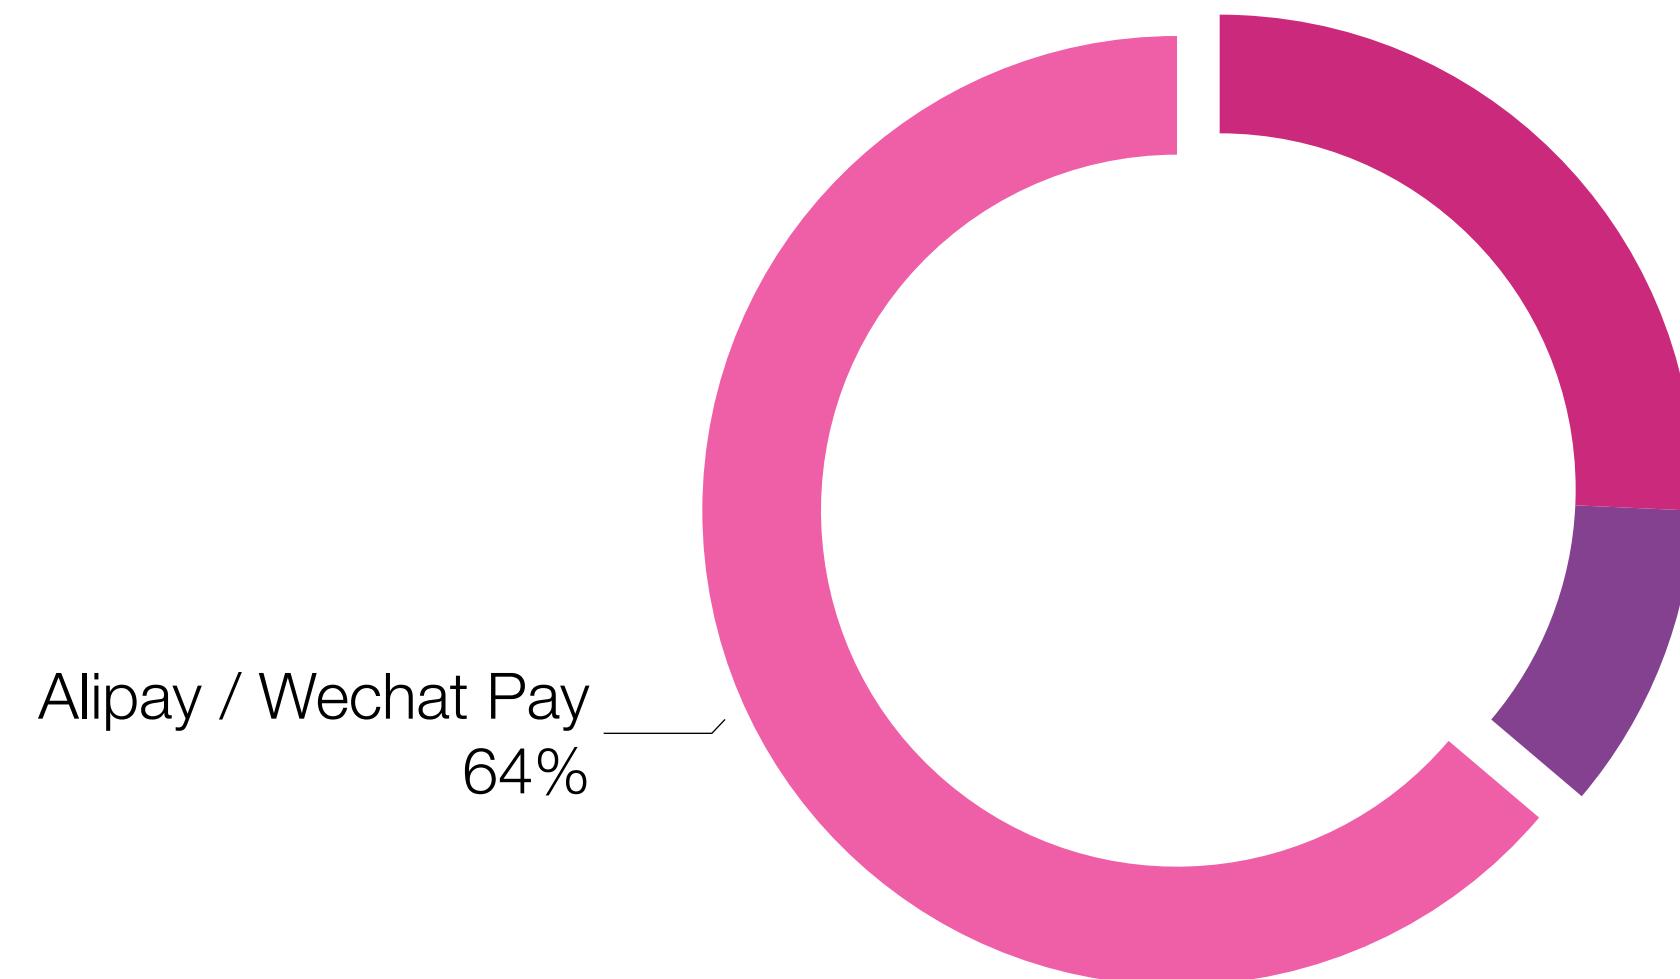

**Absolute transparency** of transactions might brought some unforeseeable consequences.

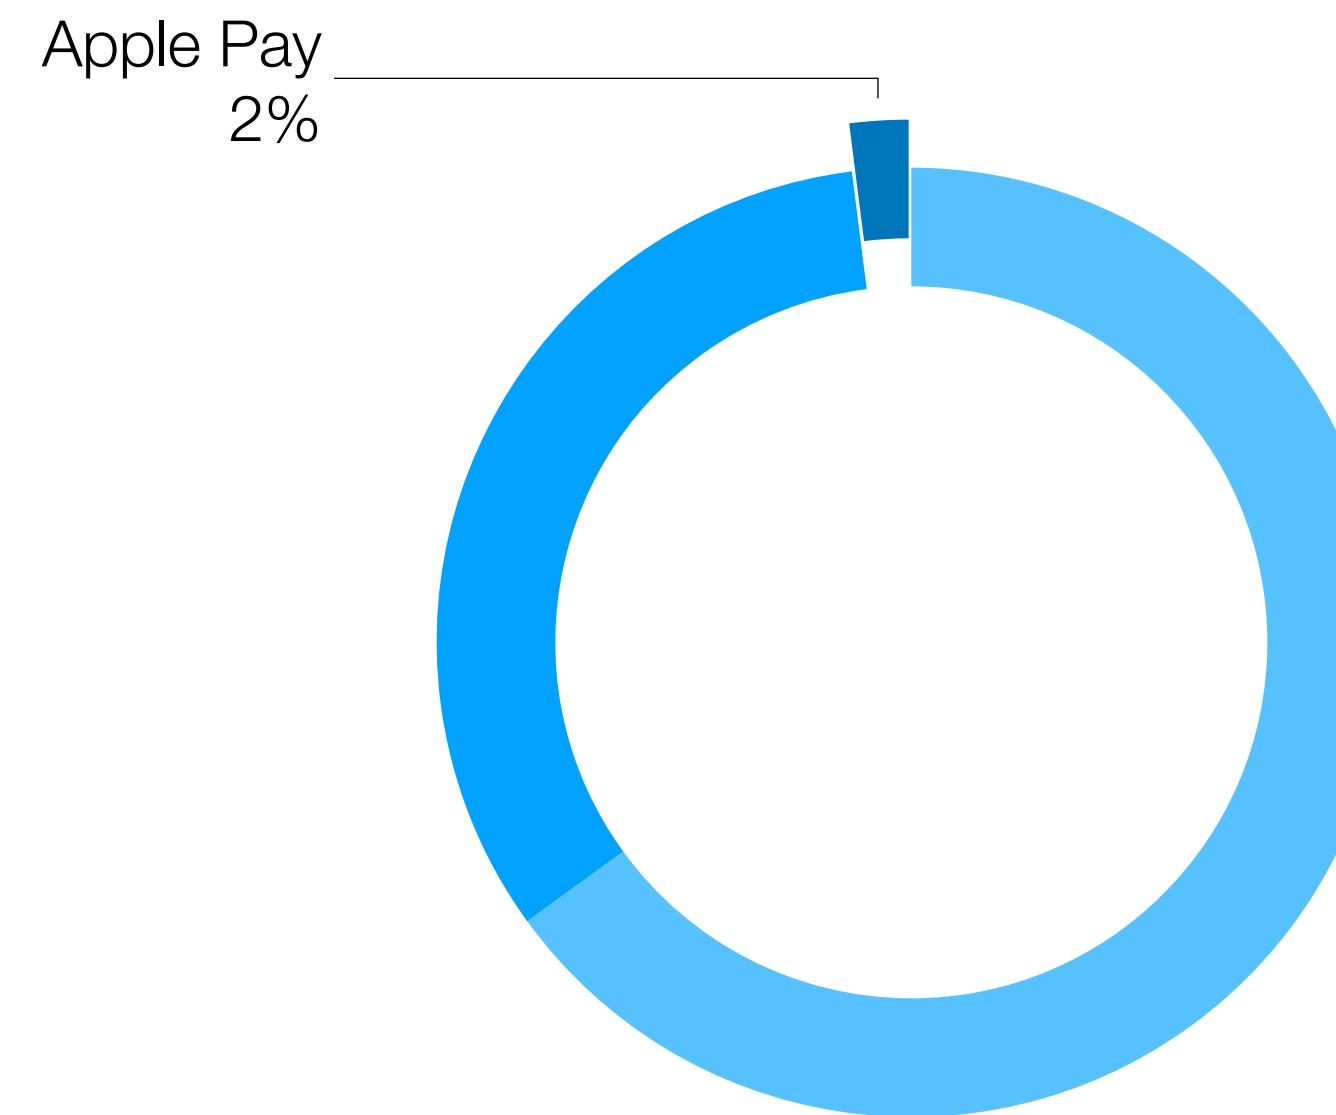

## VIRTUAL PAYMENT IN PHYSICAL STORES

EAST

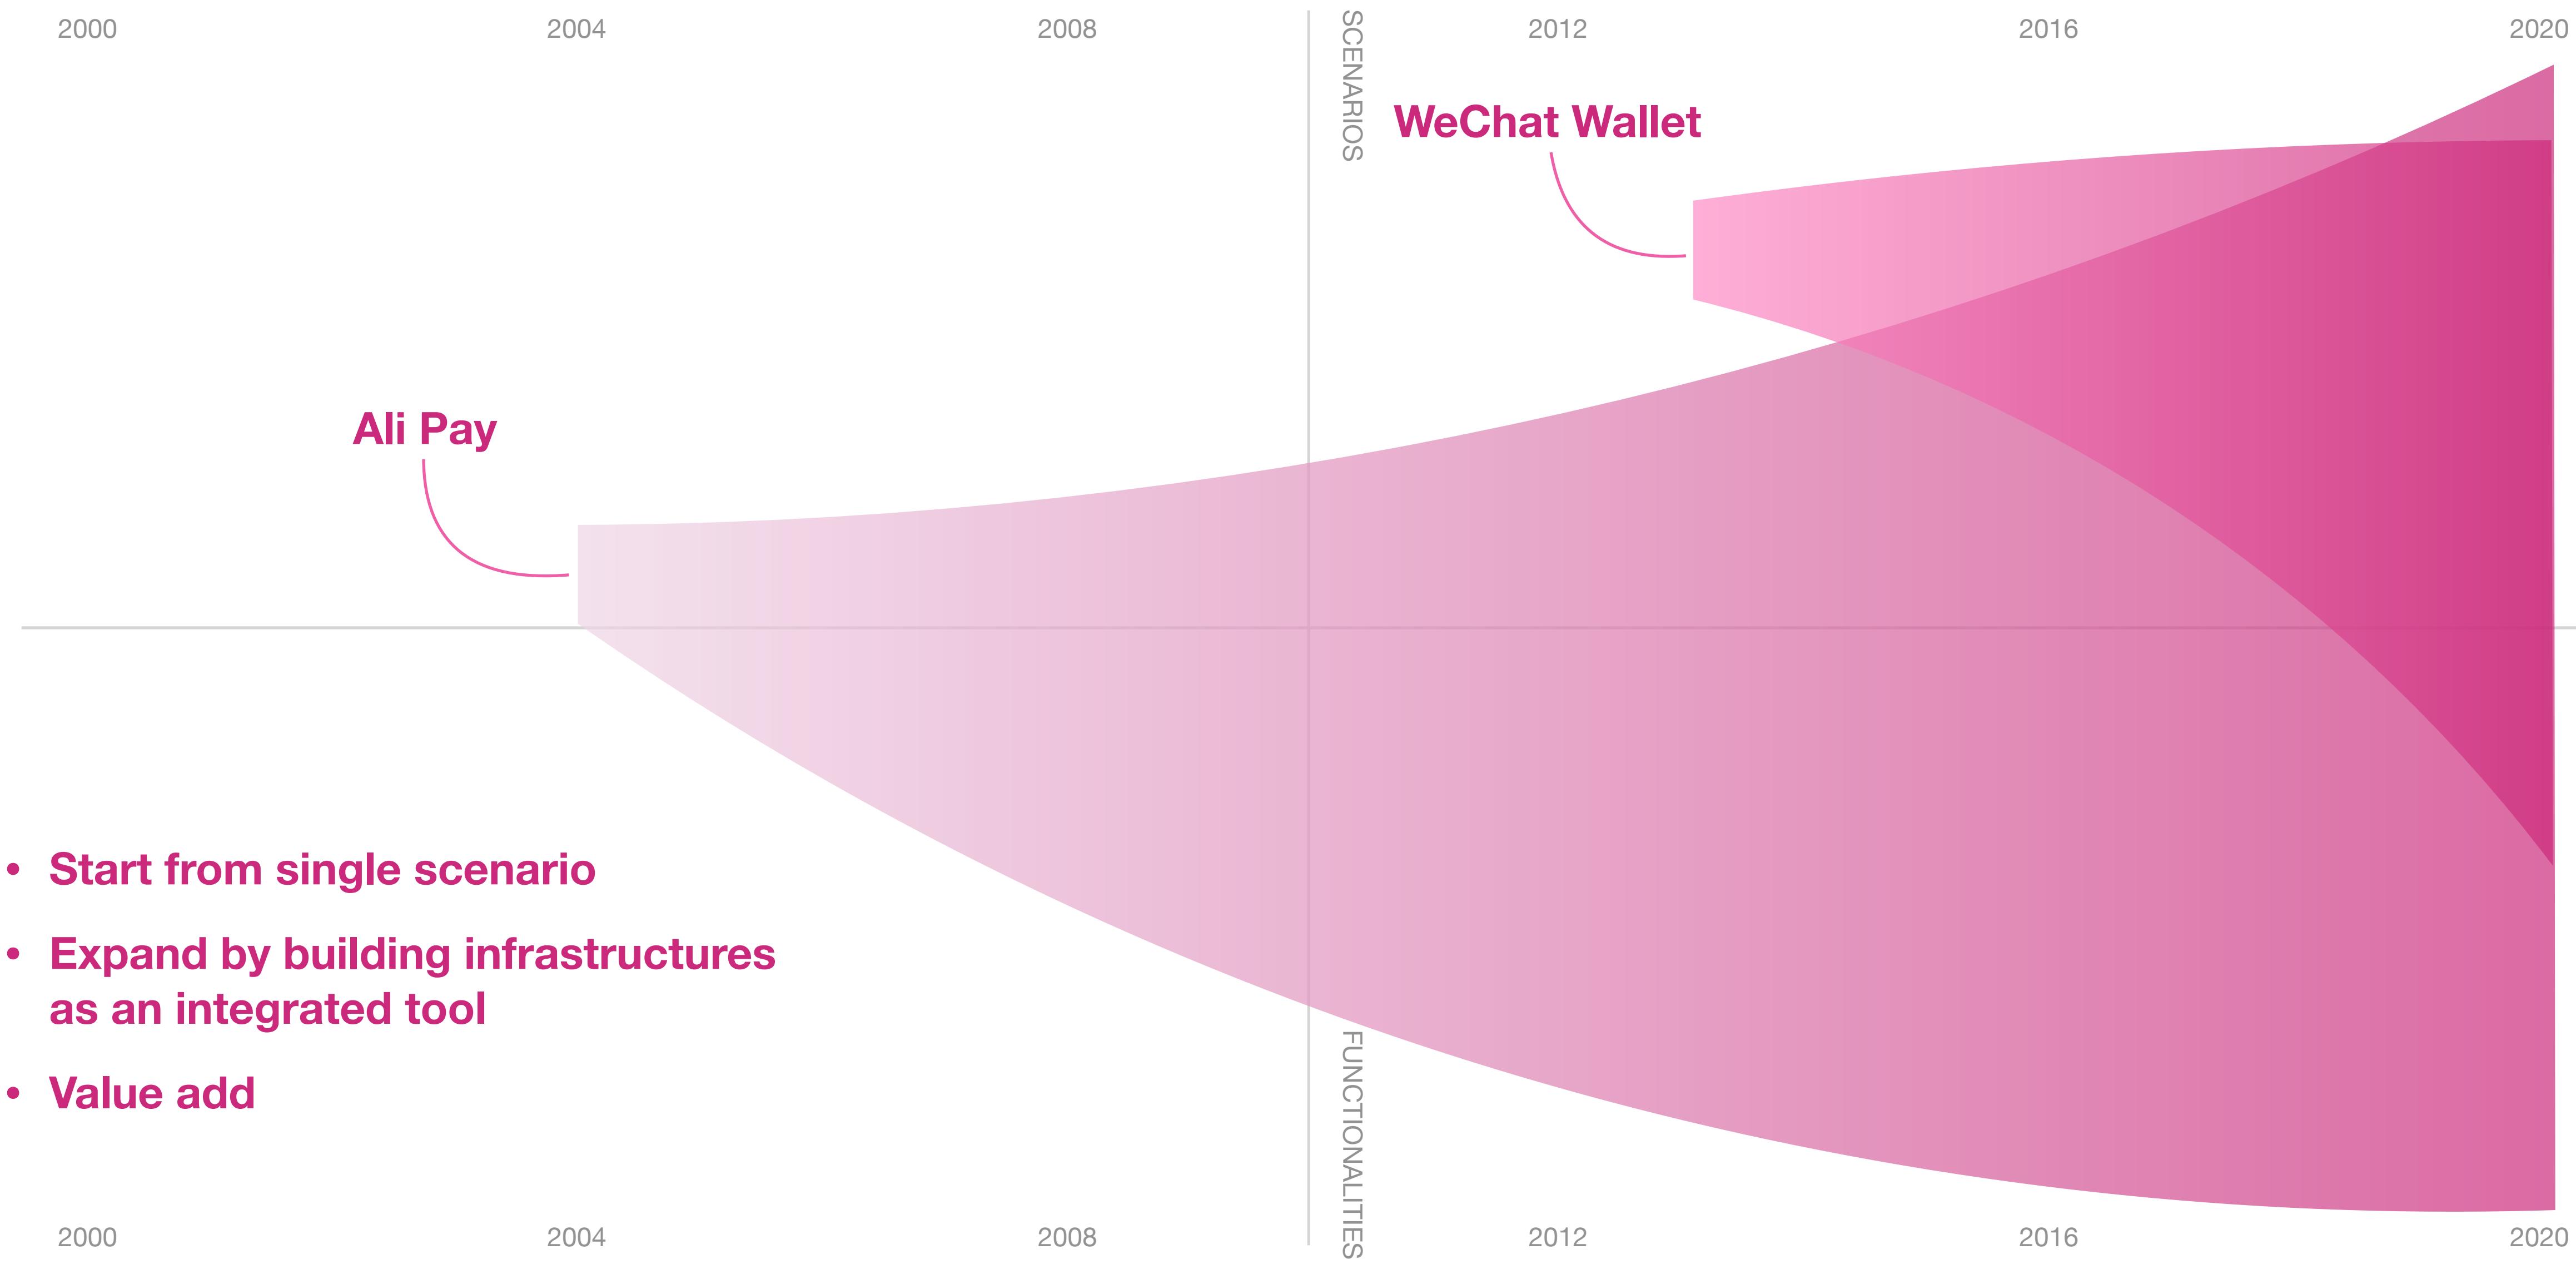

WEST

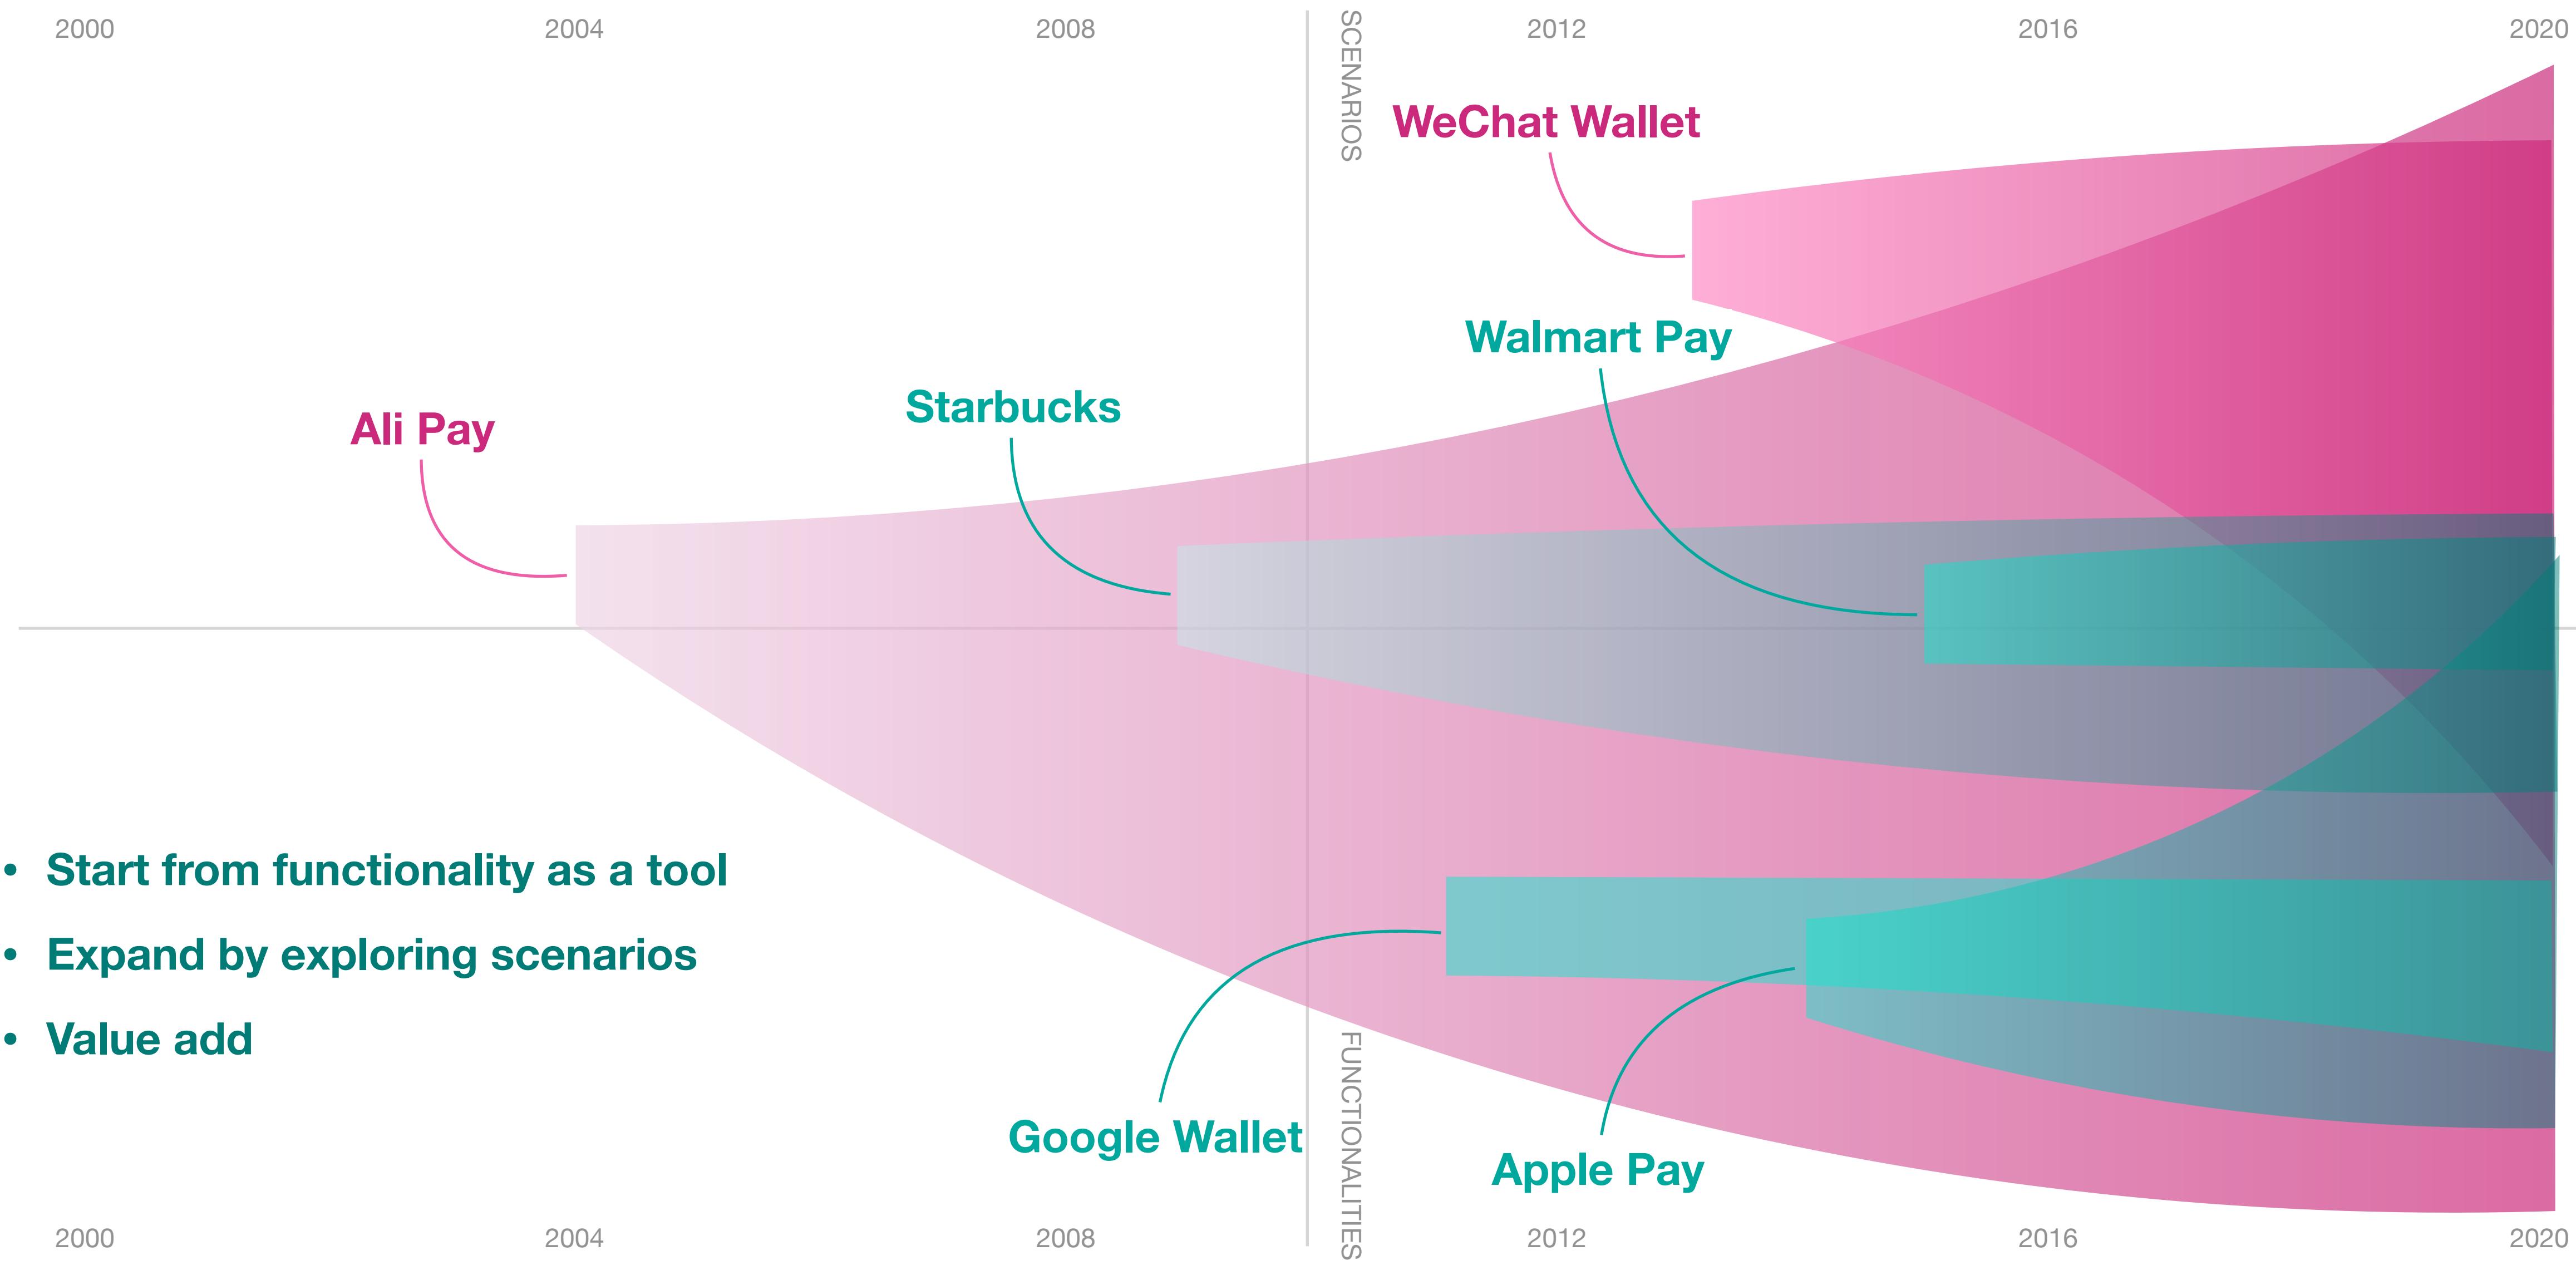

- Debit / Credit Card
- Cash
- Alipay / Wechat Pay

- Debit / Credit Card (estimated)
- Cash (estimated)
- Apple Pay

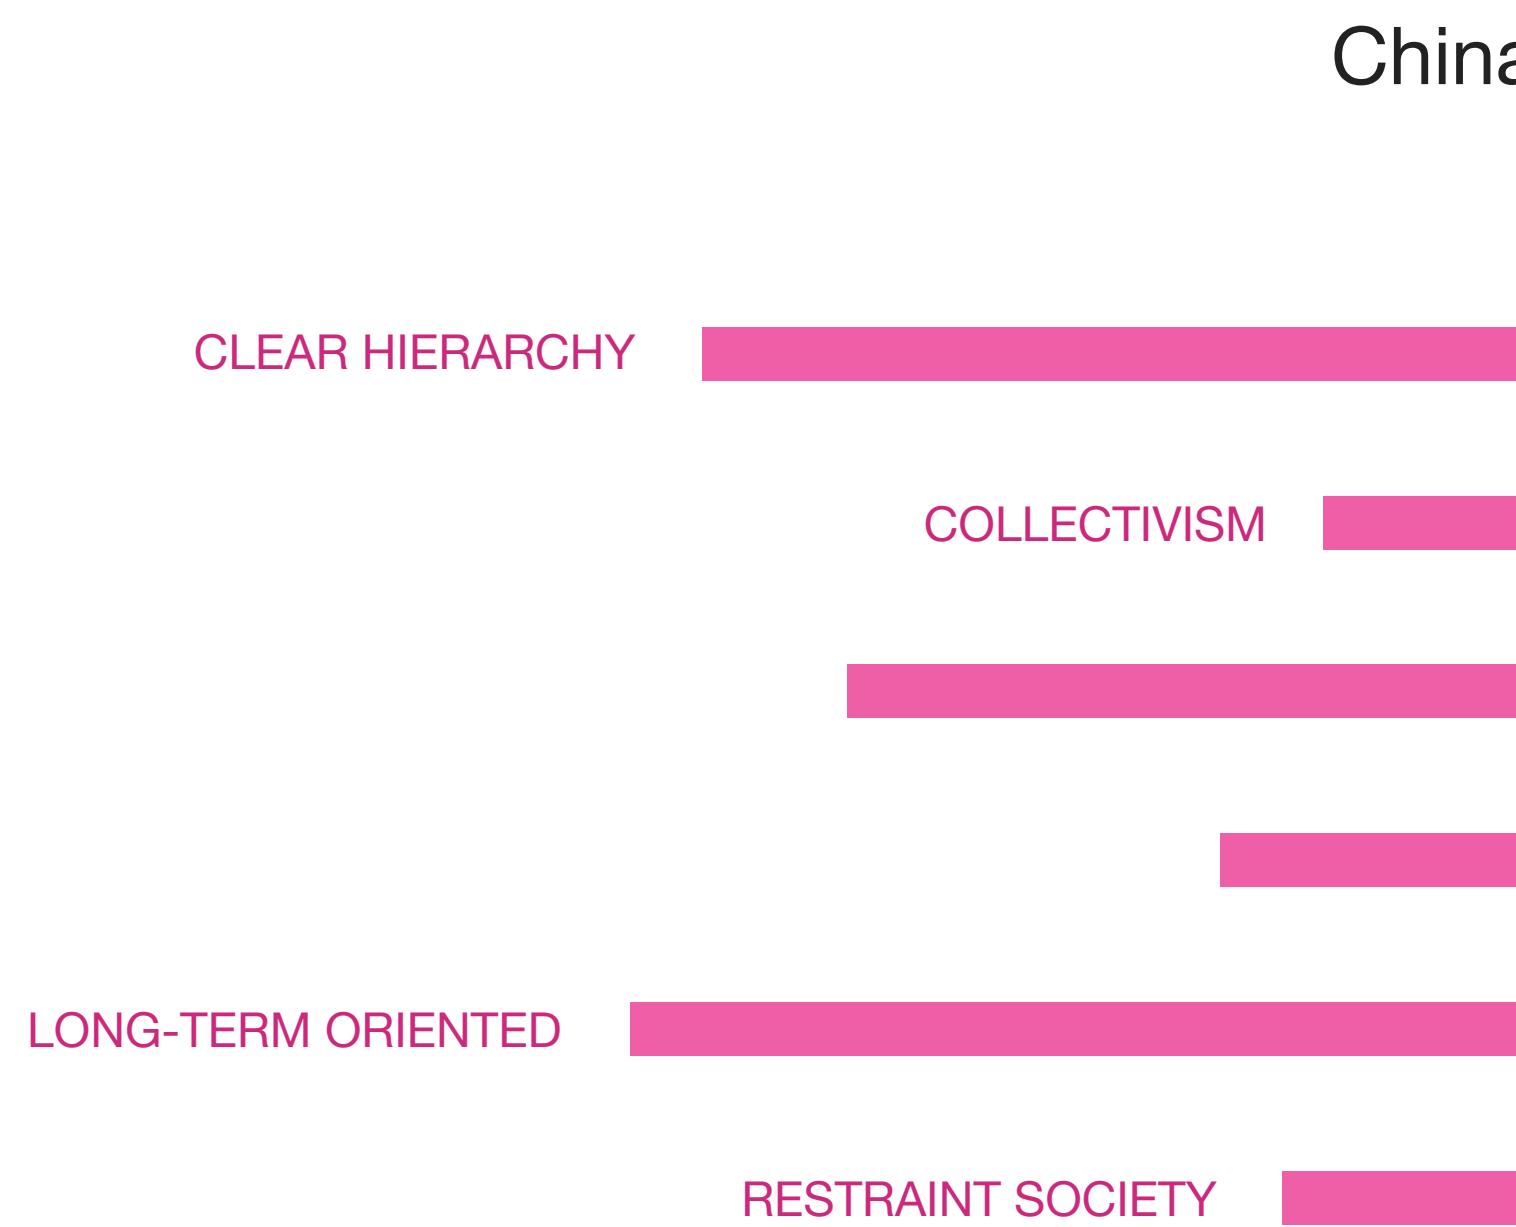

## PROGRESSION PATTERNS

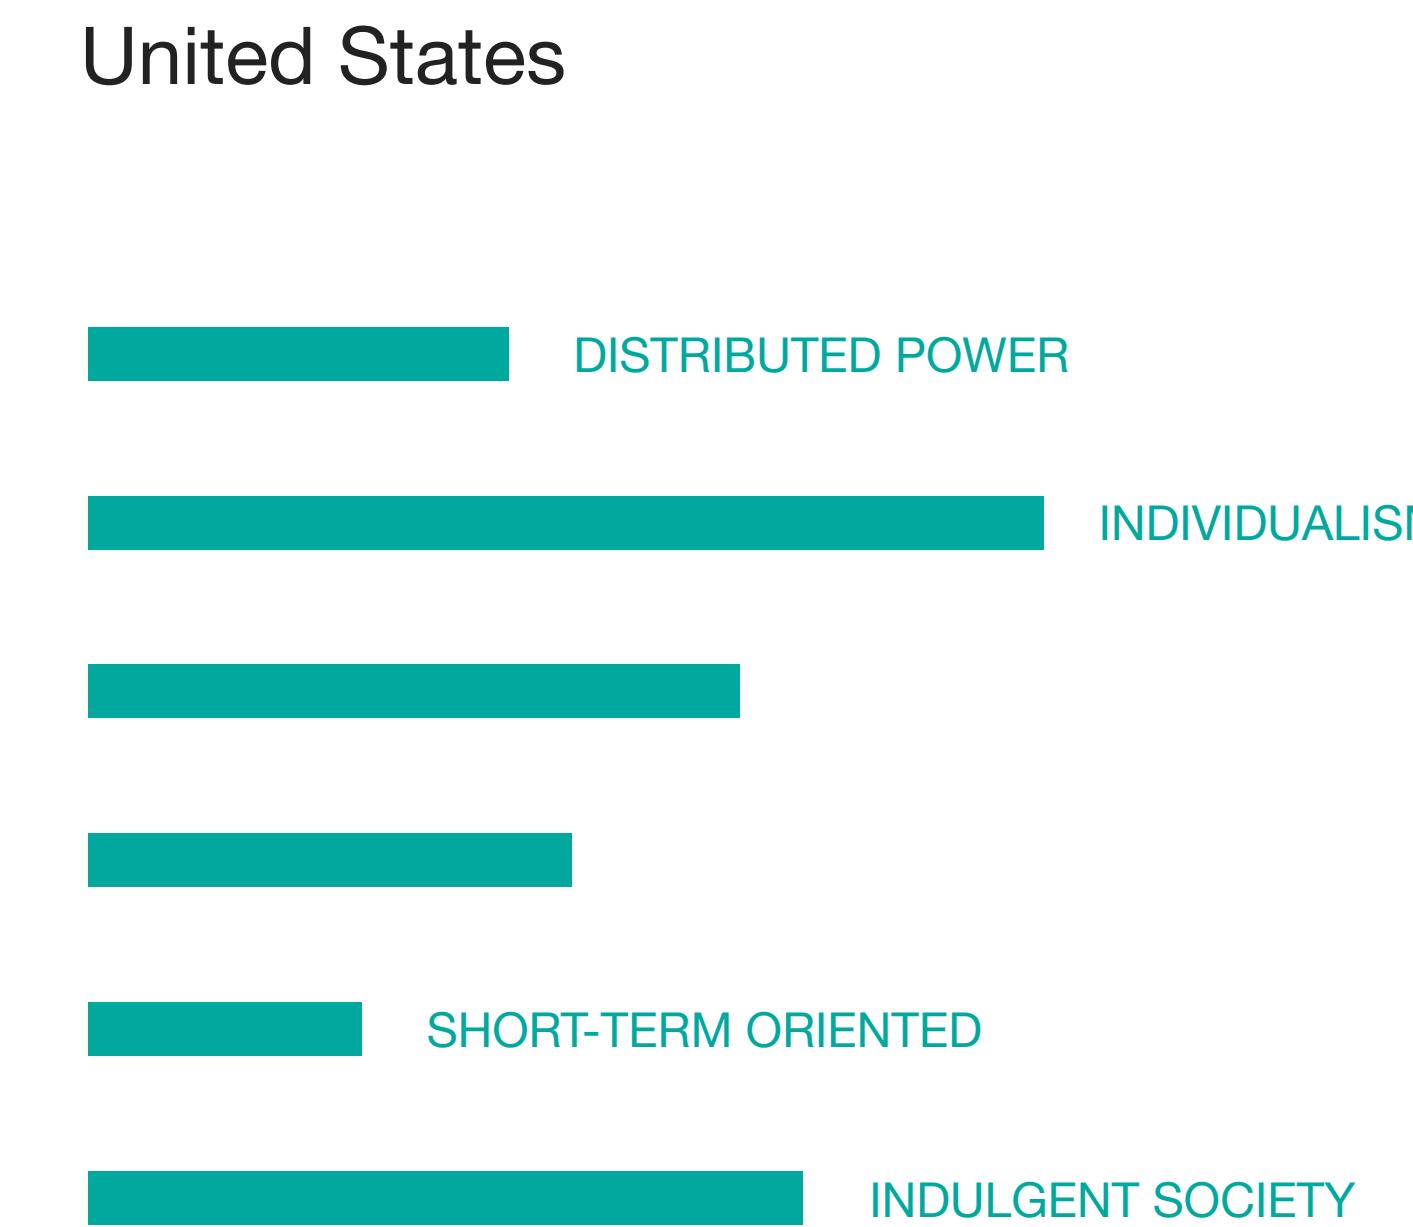

## PROGRESSION PATTERNS

## EAST

## WEST

---

## EAST

---

### Less Iterations

Paper money and coins > Food Stamps >  
Credit/Debit Card > E-Bank > Mobile Payment

### Immature credit system

Alibaba is taking the lead of building the first  
credit system in China

### Wealth is the materialization of virtue

Economy is the realization process of moral  
pursuit and material satisfaction

### Open-minded about data and privacy

People are used to give up privacy for certain  
convenience

---

## WEST

---

### ITERATIONS OF PAYMENT SYSTEM

### CREDIT SYSTEM

### CLASSICAL ECONOMY VALUES

### DATA LITERACY

### More Iterations

Paper money and coins > Check > Charge Card > Credit/Debit  
Card > Prepaid Card > Online Payment > Mobile Payment

### Established credit system

Three national credit reporting agencies keeping records on  
financial habits

### Wealth is the accumulation of material forms

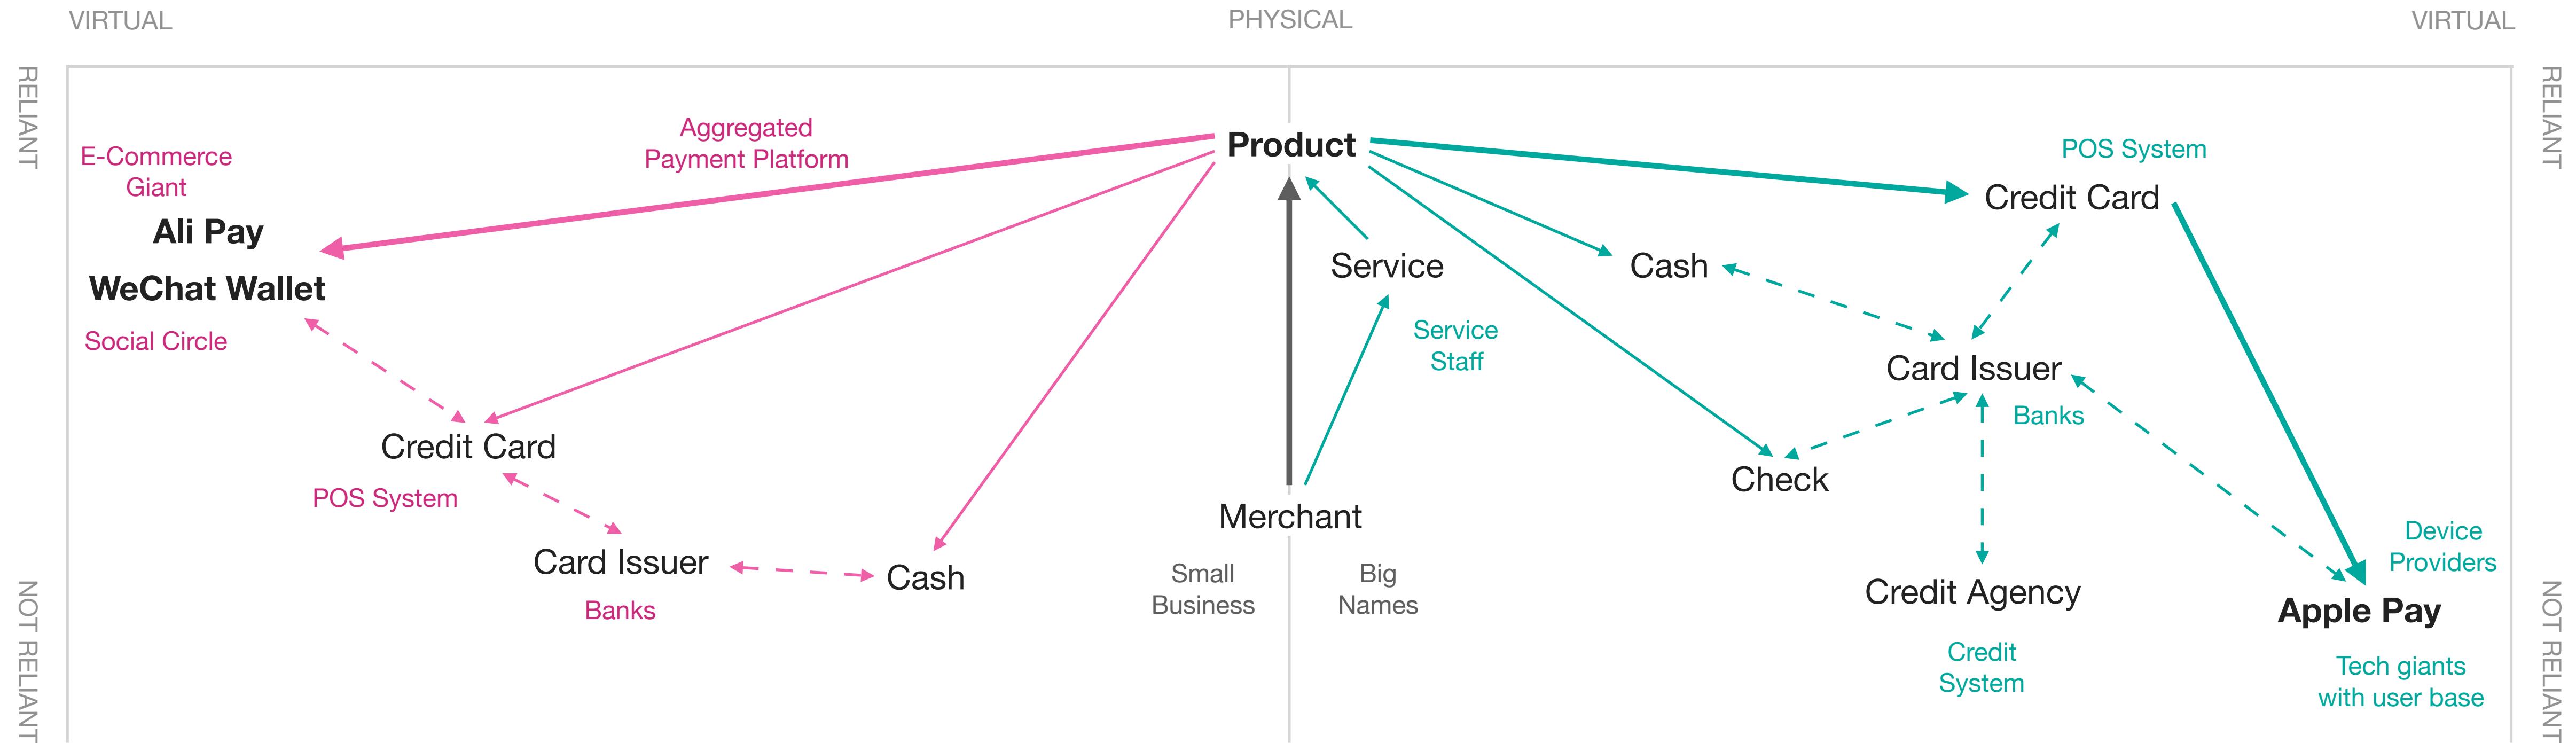

The maximization of interests is the main purpose of resource  
allocation

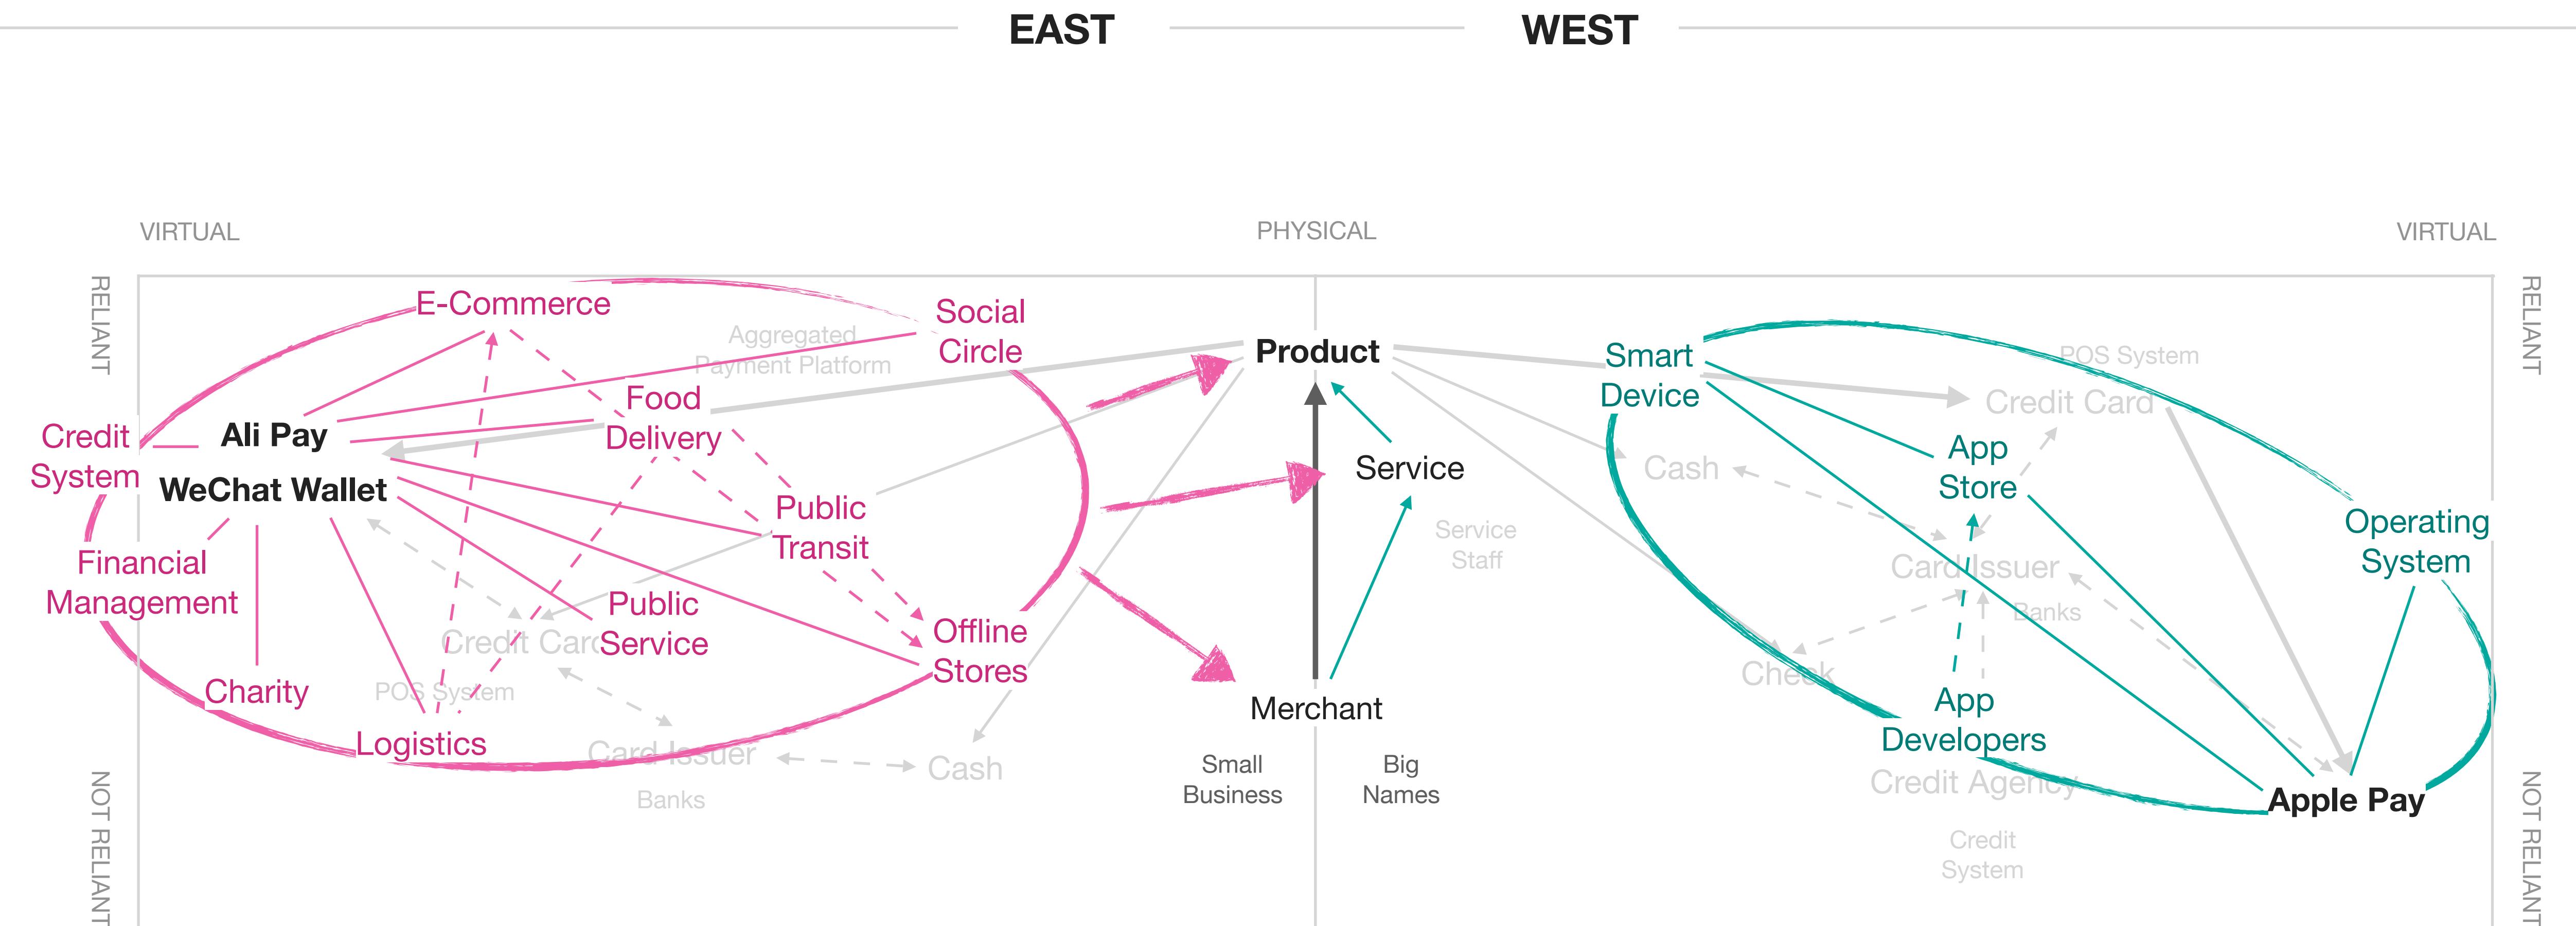

### Conservative about data and privacy

We all know what happened to Facebook....

# **Imagining what might go wrong**

Not: nothing is ever perfect, so why worry?

Instead: how do we better look after our monsters (Latour)

- **Security & trust:** data breach, data leaks, data loss, theft, data out of my control
- **Access:** opaque technologies (e.g. AI, blockchain) of inner workings and points of control
- **Who is this a problem for?-ism** (after Suchman): faulty assumptions of user-base, assumed problems
- **Agency & control:** I don't know what IS my control, how, when or where (mom's WWF)
- **Sustainability** of time & attention: services like social media that monopolize time, attention, engagement
- Inherent problems of **scaling**: unanticipated effects arising from the interconnected nature of the information infrastructure, incomplete knowledge of the whole (after Sundeep Sahay and Geoff Walsham)
- **JIT** expectations of info that is 'always on': loss of critical thinking and assessment abilities
- **Default growth mindsets:** unchecked assumptions about end goals of new products and services
- **Environmental sustainability:** obsolesce, products we can't fix ourselves
- Advocating for **independent actors** (people, places, things) v. **society as a whole**
- Responsibility to provide **access to "public" knowledge**, interests, info, data
- and more...

1. Project name and topic
2. Problem definition
3. Objectives of your project (aims, goals, your 'hunt')
4. Approach & plan: what are the parts of your project:
  1. Research (into what)
  2. Analysis (of what)
  3. Synthesis -are you making paper or functional prototypes of your product/service/system? A framework, heuristic or rubric?
  4. How will you (or would plan to) test your hypothesis and/or prototype? Can you show what is "improved" or potentially improved against our goals? How would you/did you collect data/information to prove/disprove your hypothesis of "improved"? What are relevant measures/metrics?
5. We will meet on the 27th in teams, privately, once again. Bring these first four bullets in a reviewable form so that we can discuss.
6. For class Tuesday April 3rd, we will do mid-progress share-outs in class as a group.

## **Food-for-thought to help you get started on your project:**

- Plot pathways to extreme ends of utopian and dystopian futures
- What are the assumptions at the base of culture (worldviews) that shape your product/service/systems? (Mumford, Ellul, Winner, Postman)
- For your product category, describe or illustrate how the advancement of accepted ends has become ingrained in our thinking; how we might better account for the consequences of the systems we design and build (Winner, Wacjman, others)
- How do the promises of your existing product/service (time saving appliances, control of our environments, flawless looks, etc.) contrast with their direct, goal-oriented results, and ALSO their associated unintended, unforeseen consequences (CO2, mounting trash heaps, time-sucking devices)? Make comparative lists.
- Who are the stakeholders in the wider ecosystem of your product/service/system? There is a TON on great scholarship out there. Please share relevant bits from Carlos. Here is one: <http://portals.wi.wur.nl/files/docs/ppme/BobCavana.pdf>
- What are your new goals for the product/service and its far-ranging consequences (Wacjman, Suchman, others)? Be specific.
- How does your solution entail a new understanding (mindset) and/or ability to act (agency) on behalf of its publics?

## VIRTUAL PAYMENT

Unaddressed

Faster, cheaper transaction process  
Transparency of transactions

Elevated threshold

**Table 2:** A proposed taxonomy and hierarchy of negative consequences of research

Categorisation	Definition	Probability	Researchers' obligations
Unaddressed	Consequences are known to the researchers but are not examined because of the predefined scope.	High	Public disclosure and engagement with stakeholders to achieve consensus on research scope and objectives.
Unintended	Consequences are known to the researchers, but with low enough probabilities that associated risks can be ignored.	Low	Include in the scope of the research measures to avoid negative consequences, despite the very low probability.

## **Problem Definition**

To better understand people's acceptance of emerging payment methods like Apple Pay and Ali Pay. And to explore a just, sensible, and viable future for smart payment system in the US.

## **Objectives/Goals**

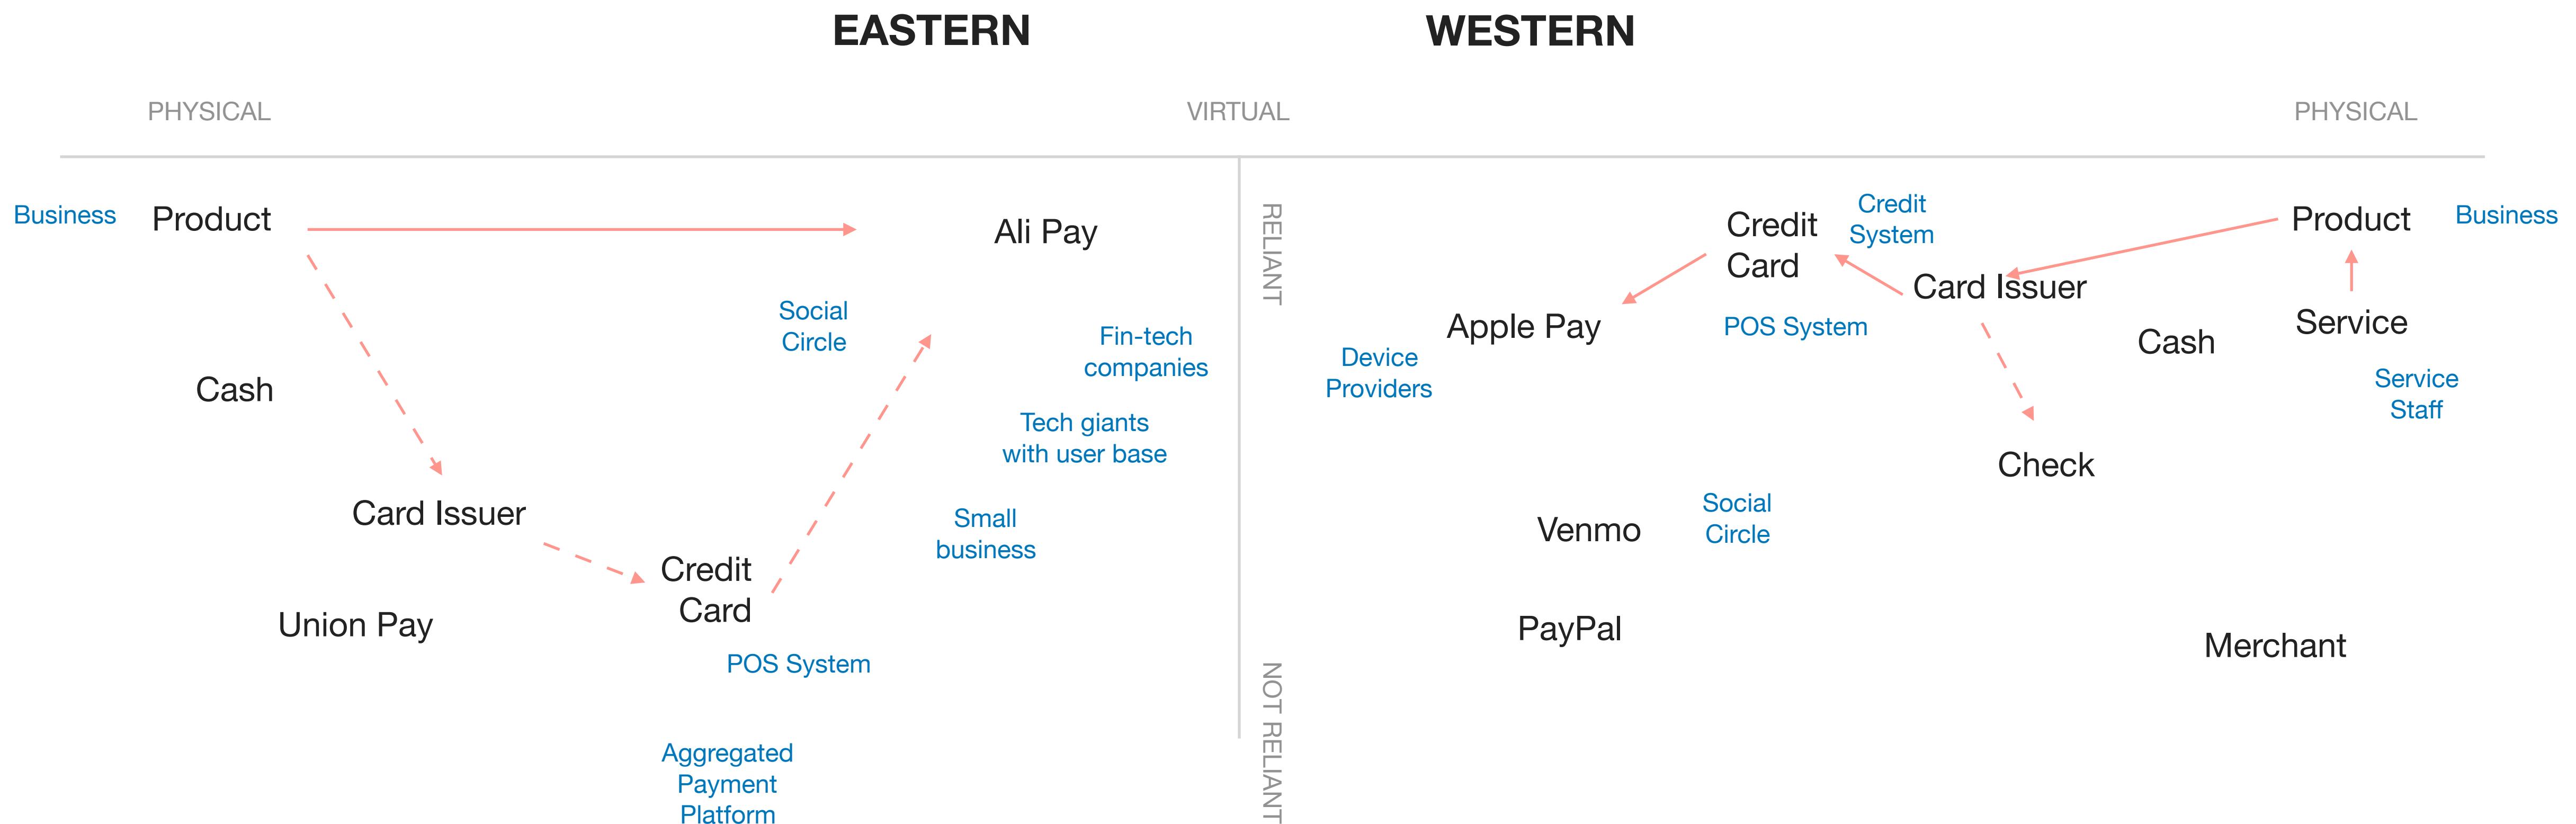

To explore a just, sensible, and viable future for smart payment system based on answering:

- What does a just, sensible, and viable future of payment mean for people?
- How can virtual payment make benefit for various stakeholders?

## **Approach/Plan**

- RESEARCH
  - Era analysis of Eastern and Western - Understand the evolution patterns of payment and credit system
  - Case study - existing cases of smart / mobile payment, successful and unsuccessful
- ANALYSIS
  - Analysis unaddressed, unintended, unexpected... consequences of virtual payment
    - Elevated threshold of trading / payment for different generations, races, classes
    - Forms of engagement / Shift of the role for the person in the process of payment
    - Data collection and further use
    - Transparency of transaction information
  - Analysis stakeholders and their relationships in the ecosystem
  - Metrics
    - For people, what do they value? Privacy? Individualism? Connect with each other?
    - For the society, how can they support? Gov surveillance?
    - For business, how to make sure virtual payment could still serve the business well?
- SYNTHESIS
  - Solutions that has addressed negative consequences and leading toward a just future
  - Prototypes (tbd)
- VALIDATION

## ZOOM IN

*That was the last time—  
40 or so years ago—  
entirely new end-to-end  
payment networks  
directly affecting end  
users were introduced in  
the United States.*
